\*Alternate dosage forms (e.g., liquid, crushable immediate release tablets, non-enteric coated, topical patches) for the product are available. Dose, frequency of administration, and manufacturers may differ from the brand name listed.

ODT = Orally Disintegrating Tablet

1. Enteric coated formulation.
2. Time release formulation.
3. Unpleasant taste.
4. Can irritate mucus membranes and/or skin.
5. Capsule may be opened and contents removed for administration without crushing, chewing, or dissolving.
6. Tablets are made to disintegrate under the tongue.
7. Tablets MUST be dissolved in liquid as recommended by the manufacturer.
8. Tablet is scored and may be broken in half, at the score line, without affecting release characteristics in most situations.
9. Liquid filled capsule.
10. Contents may be dissolved in water for administration.
11. Not recommended by manufacturer. No data available.
12. Women who are or may become pregnant should not handle crushed or broken tablets.
13. Miscellaneous
14. Product designed to dissolve in the mouth.
15. Once digestive enzyme capsules are opened onto food, swallow immediately to reduce irritation of mucosa. Follow-up with fluid. Contact with foods having pH > 5.5 can dissolve enteric coating.
16. Crushing diltiazem tablets will alter the controlled-release mechanism resulting in instant release of drug which may cause faster absorption, earlier time to max concentration, and higher max concentration. The duration of effect might be decreased necessitating more frequent dosing when tablets are crushed. Patients who are administered crushed tablets should be closely monitored for exaggerated effect.
17. Antacids and/or milk may prematurely dissolve the coating of the tablet.
18. The manufacturer reports altered absorption kinetics that may or may not be clinically significant.
19. Refer to individual product package insert for guidance on crushing.
