# PICC PRINCIPLES OF CARE

## **NEWLY INSERTED PICCs**

- Restrict arm movement for first 2 hours to decrease bleeding
- To decrease need to change dressing, apply pressure bandage over the occlusive dressing for the first 24 hours

# CAPS/BUNGS

- Access using clean technique
- Change weekly with aseptic technique
- Positive pressure bung for all arrow PICCS

# Flushing

- In a pulsatile, (stop/start) manner
- With normal saline before and after access
- Weekly if not in use
- May or may not require heparin

# Dressings

Changed weekly and prn using sterile technique

#### Syringes

• Not smaller than 10ml

### Confirmation of placement

- By aspiration of blood
- · Ability to easily infuse solutions
- Normal appearance of PICC site and patient's arm
- · Measurement of PICC length from insertion site to catheter hub

#### Clamps

• Must be left open when a positive pressure bung is in use
